Purpose

NTACT-hosted, CTE Perkins V Plan Collaboration Summit will provide an opportunity for interdisciplinary teams comprised of state and local partners work collectively to operationalize Perkins V plans for access, equity, and inclusiveness for students with disabilities.

While the summit is being hosted adjacent to the Association for Career & Technical Education's (ACTE’s) CareerTech Vision 2019 conference in Anaheim, California, the NTACT event and content are separate from ACTE’s CareerTech Vision 2019 and requires a separate registration to attend.

Participants

- State-level agency personnel focused on secondary transition-age students (14-21 or older) in Career and Technical Education, Vocational Rehabilitation, and Special Education
- Other state agencies that support programming for transition age students (e.g., Mental Health, Developmental Disabilities)
- Local Education Agency representative(s) to support planning for implementing the Perkins V plans

Outcomes

Participants will work in state and local cross-disciplinary teams of special education, vocational rehabilitation, and career and technical education to develop a Perkins V implementation plan that:

- ensures students with disabilities have access to and can persist in CTE programs and curriculum;
- fosters collaboration across building-level and agency partners;
- outlines strategies for data sharing and data use; and
- supports teachers and school professionals in providing students with disabilities’ high quality, differentiated instruction for 21st century employability skills.
